

Helping Clients: Prevent, Respond to and Survive a Data Breach!

Service Features - Cybersecurity Overview

Organization Security Focus

Not only is it important for each employee to remain cognizant of their own contribution to the business' security, security needs to be a team effort. We can help determine how well-prepared your organization is as a whole in terms of its security, and identify weak points with:

- Dark Web Breach Assessment to identify hidden risks to employees and an organization
- Security Risk Assessment to identify security weaknesses
- Employee training, phishing and policy acknowledgement reports
- Security information central repository

Employee Security Focus

When it comes to your business' security, your employees are your first and last defense. We can help evaluate how ready they are for that responsibility, as well as help improve their preparedness, through:

- Weekly recurring security micro lessons, taking up 1-2 minutes of their day
- Monthly security newsletters
- Simulated phishing emails to employees
- Security policies that employees electronically acknowledge

Prevent, Respond to, and Survive a Data Breach!
